Summer Packets
The Elementary Summer Packets include 20 days of literacy, math, science and social studies activities to prepare students for the upcoming school year. For example, kindergarten students will engage in activities aligned to first grade concepts or skills. These are optional resources to share with families.

Grade Level Milestones and Activities
The Family Loft is a website to help support young scholars. We know that the adults who spend time with students out of schools time need more information about what skills students are learning throughout the year, and effective strategies to practice and support learning. We created the Family Loft to help bridge that gap. You can use this site by exploring the grade level milestones page to learn about what milestones are and how you can support them at home. From there, you can find out what reading and math look and sound like at a particular grade level milestone and what specific skills children need to master. As a reminder, each child will progress differently: your child may still be learning skills from a previous grade or may have already mastered the grade-level milestones in this document. The goal is for your child to have access to grade level instruction while receiving individualized support where it is needed. Talk to your teacher about your child’s specific needs.

NCDPI Literacy at Home - A Summer Resource
This digital resource provides literacy activities at each grade level, pre-kindergarten through fifth grade. Families and communities may access this resource for activities that specifically target the literacy skills of phonemic awareness, phonics, fluency, vocabulary, reading comprehension, and oral language. We encourage you to share the Literacy at Home resource with families to encourage their continued support of literacy development over the summer months.

Let’s Get Ready Guide - For Rising Kindergarteners
The Let’s Get Ready! Guide is intended to provide family-friendly resources on age-appropriate developmental skills, support tips, and at-home activities where adult/child interactions are the central focus. It is not intended to determine if a child “is” or "is not" ready for kindergarten. We encourage you to share this resource with families of rising kindergarten students.
